08 — APP UI LANGUAGE

NeuroIQ is the first platform built to rebuild cognitive pathways in people with TBI, post-concussion syndrome, and learning-related brain impairment. Binaural entrainment, subliminal audio delivery, and user-defined datasets — running during sleep, timed to the brain's natural processing intervals.

01

Brand Foundation

MISSION

To give people with damaged or underperforming brains the tools to rebuild, retain, and reclaim their cognitive potential — using the hours they are already sleeping.

THE THREE-LAYER PRODUCT

- Layer 1 — Binaural entrainment. User selects frequency. Brain is tuned to target state (delta, theta, alpha, gamma). The neural window opens.
- Layer 2 — Subliminal delivery. Content is encoded and delivered below the conscious auditory threshold in timed intervals matched to the brain's processing cycle.
- Layer 3 — User dataset. Any content the user defines — notes, documents, audio transcripts, study materials. The payload is theirs.

BRAND PERSONALITY

Precise

Clinical accuracy. Every claim is backed by the neuroscience of sleep and neuroplasticity.

Hopeful

Built for people told recovery has limits. NeuroIQ rejects that framing — with evidence, not promises.

Empowering

The user controls frequency, dataset, and schedule. Their brain. Their recovery. Their terms.

Quiet

Works while the user sleeps. The brand reflects this — it does not shout. It trusts its results.

PRIMARY TAGLINE

"The pause is where you learn."

SECONDARY TAGLINE

"Rebuild your brain. While you sleep."

PRODUCT LINE

"Your data. Your frequency. Your recovery."

02

The Pause Mark

WHAT IT IS

The mark between "Neuro" and "IQ" is a sleep spindle — the exact EEG waveform signature of memory consolidation during NREM sleep. It appears as a burst of neural oscillation (12–15 Hz) that waxes, peaks, and wanes over 0.5–3 seconds.

This is not decoration. NeuroIQ delivers data packets timed to these natural intervals. The pause between delivery cycles is when the hippocampus encodes what it just received. The logo shows the product working.

THE THREE-WORD EXPLANATION

Data

DELIVERED

Pause

ENCODES

Retained

LEARNED

The pause is not dead air. It is the moment of active neurological encoding. NeuroIQ's intentional inter-stimulus intervals — built around natural sleep spindle timing — are what separates it from every other audio delivery system.

SPINDLE ANATOMY — WHAT THE MARK DEPICTS

Spindle Purple — #534AB7

The pause mark uses a distinct purple — separate from the signal blues — to signal a different register: not the data, not the outcome, but the *mechanism* between them. It is the only purple element in the entire brand system.

03

Logo System

PRIMARY — DARK

Neuro IQ

THE PAUSE IS WHERE YOU LEARN.

PRIMARY · SPINDLE MARK · DARK BACKGROUNDS

Primary usage. The sleep spindle sits in the reduced gap between "Neuro" and "IQ" — tighter than v1, but with the spindle mark giving the space meaning rather than just air.

PRIMARY — LIGHT

Neuro IQ

THE PAUSE IS WHERE YOU LEARN.

neuroiq

APP ICON

iOS · Android · Favicon

Node mark in rounded square. Wordmark below for list views. No spindle at icon scale.

Neuro
IQ

STACKED VERTICAL

Square formats

Social profiles, square cards, presentations. Spindle as separator between the two words.

CLEAR SPACE & MINIMUM SIZE

Neuro IQ

Maintain clear space equal to the cap height of the "N" on all four sides. Never allow other elements within this zone. The dashed border above represents the minimum clear space boundary.

MINIMUM SIZES

Digital	160px wide minimum
Print	40mm wide minimum
Note	Below 160px the spindle mark loses legibility. Use app icon variant instead.

04

Color Palette

PRIMARY PALETTE

Deep Night

#050A14 · RGB 5 10 20

Primary background. The color of sleep itself.

Neural Navy

#0C447C · RGB 12 68 124

Secondary surfaces. Card backgrounds. Node fill.

Synapse Blue

#185FA5 · RGB 24 95 165

Borders, lines, connectors. Secondary text on dark.

Signal

#378ADD · RGB 55 138 221

IQ mark. CTAs. Active states. Primary interactive.

Sky

#85B7EB · RGB 133 183 235

Secondary text on dark. Supporting UI elements.

Mist

#E6F1FB · RGB 230 241 251

Primary text on dark. "Neuro" wordmark on dark.

Spindle

#534AB7 · RGB 83 74 183

Pause mark ONLY. The one purple element in the system. Never used elsewhere.

Recovery

#1D9E75 · RGB 29 158 117

Success states ONLY. Session complete, milestones, cognitive gains. Use sparingly.

COLOR HIERARCHY — THE 90 / 5 / 5 RULE

90%

Blues

Deep Night through Mist form the entire brand environment. Precision. Trust. Clinical credibility.

5%

Spindle Purple

The pause mark only. It lives in the gap between input and outcome. Nowhere else.

5%

Recovery Green

When you see green, you know your brain just did something. Restrained use makes it land harder.

06

Voice & Tone

TRAIT 01

Clinically confident

Every claim is grounded in neuroscience. We don't hedge. The mechanism is real — we say so.

> *"Binaural beats entrain your brain to a target frequency. During theta state, memory consolidation and new pathway formation peak. NeuroIQ delivers your content precisely at this window."*

✕ "NeuroIQ might help some users feel like they're learning better while they sleep."

TRAIT 02

Hopeful, not hype

Our users have been told their cognitive limits are permanent. We reject that — but with evidence, not promises. Hope built on mechanism is credible. Hope built on marketing is not.

> *"Your brain repairs itself every night. NeuroIQ ensures that repair process also builds new pathways to the knowledge you need."*

✕ "Unlock your brain's unlimited potential with NeuroIQ's revolutionary sleep technology!"

TRAIT 03

Respects intelligence

Our core user survived brain trauma. They don't need to be spoken down to. Use precise terminology. Trust them.

> *"Select entrainment frequency: Delta (0.5–4 Hz) for deep recovery. Theta (4–8 Hz) for memory consolidation. Alpha (8–12 Hz) for light encoding."*

✕ "Pick your sleep vibe! Deep Rest, Dream Mode, or Chill Zone."

TRAIT 04

Quiet confidence

The product works while people sleep. The brand follows that lead. Short sentences. Active verbs. No exclamation marks. No emoji in clinical contexts.

> *"Session complete. 8h 14m at 6.5 Hz. Dataset: Project Brief v3. Sleep quality: strong."*

✕ "Amazing session!! You crushed it tonight! Your brain is supercharged!! 🧠⚡🚀"

MESSAGE HIERARCHY

LEVEL 1
BRAND

"The pause is where you learn."

Primary. Everywhere — tagline, homepage hero, app store, social bio.

LEVEL 2
MISSION

"Rebuild your brain. While you sleep."

Secondary. Marketing materials, product descriptions, onboarding.

LEVEL 3
PRODUCT

"Your data. Your frequency. Your recovery."

Product line. Signals user control of all three layers.

LEVEL 4
CLINICAL

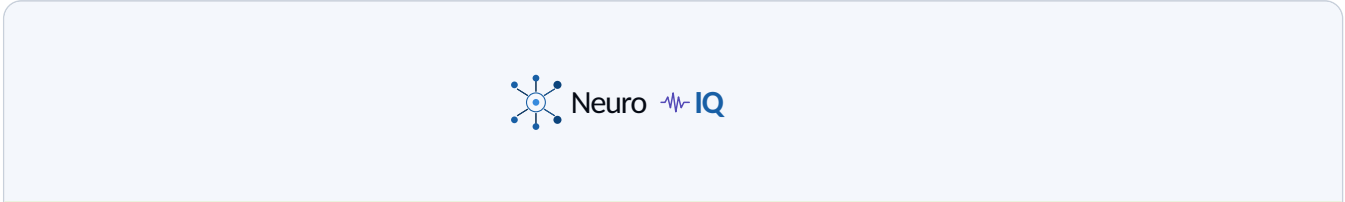
"The first platform built specifically for TBI and concussion recovery."

Clinical, investor, and press contexts where differentiation must be explicit.

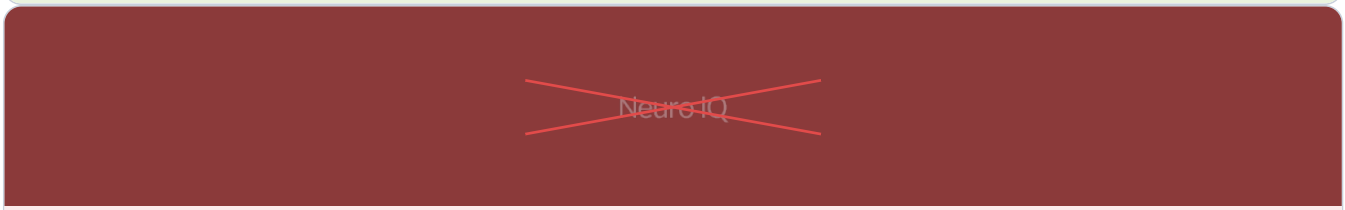
07

Logo Usage Rules

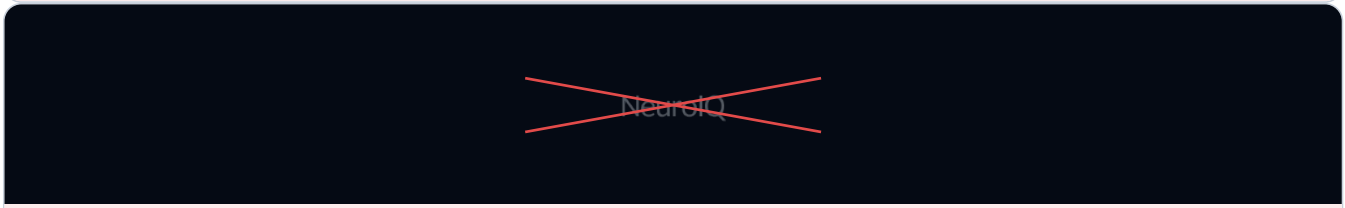
✓ Primary logo on Deep Night



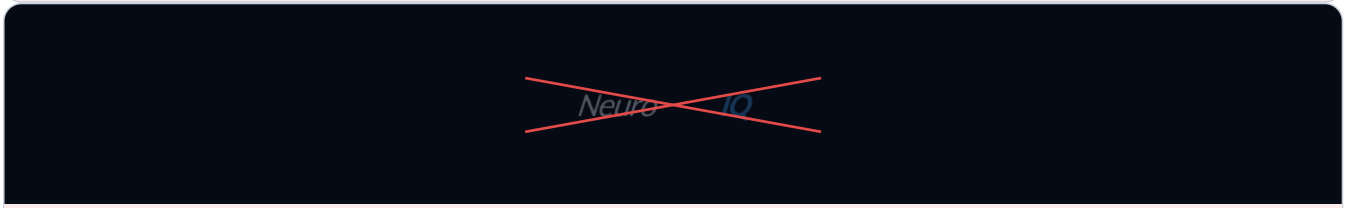
✓ Light logo on light background



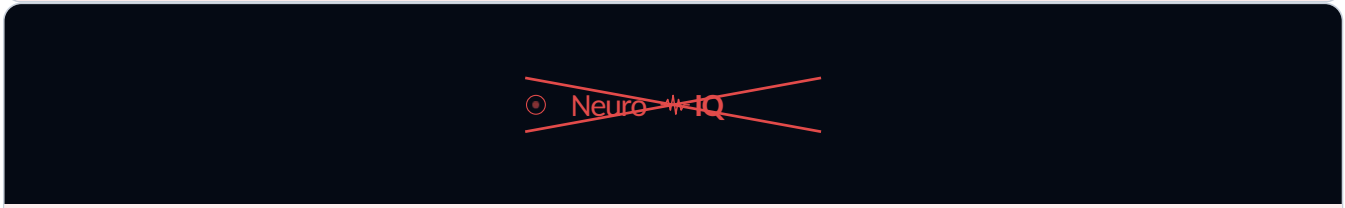
✕ Never on non-brand colored backgrounds



✕ Never remove the node mark or spindle



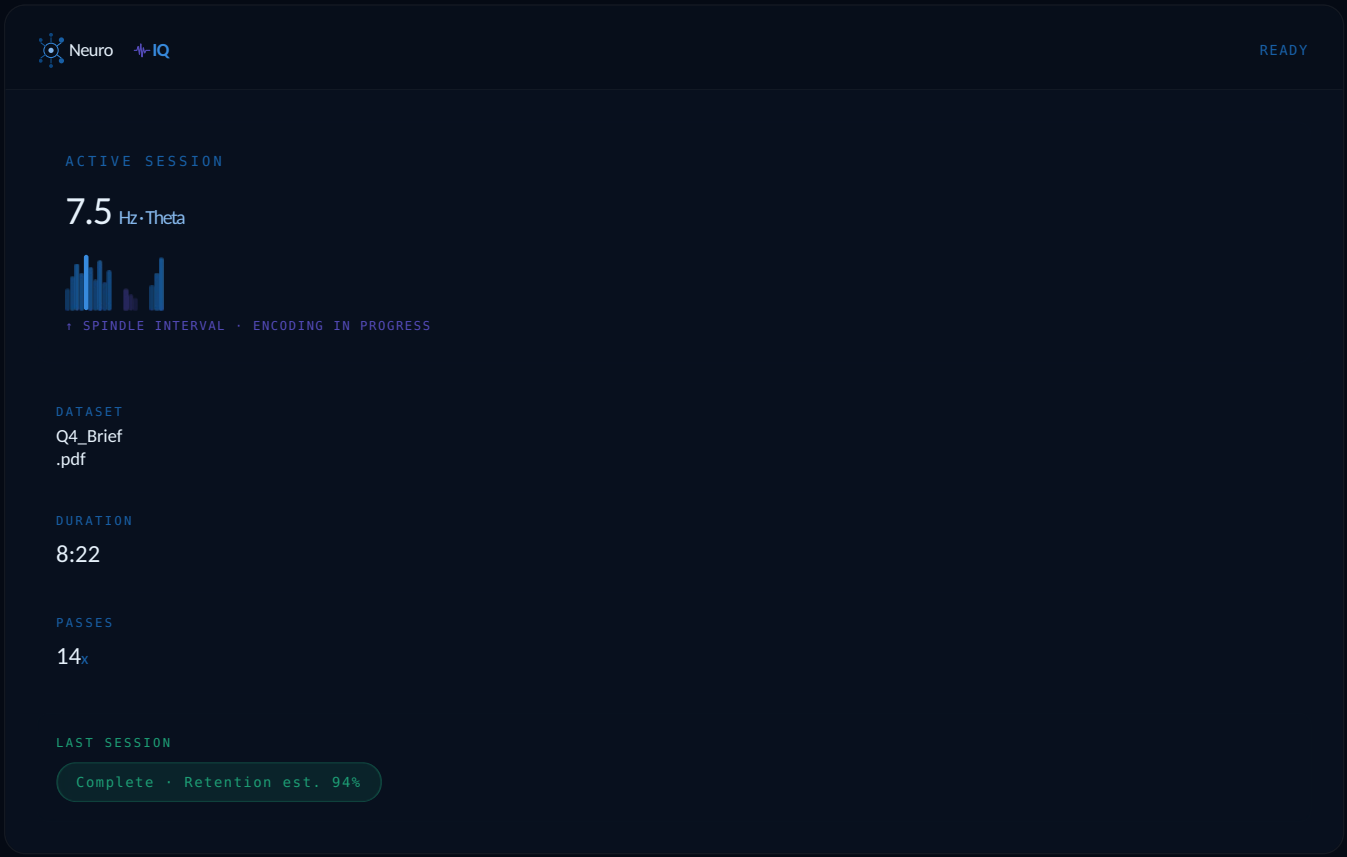
✕ Never skew, stretch, or distort



✕ Never recolor — including to single-color red, green, or black

08

App UI Language



UI DESIGN PRINCIPLES

Dark by default

The app runs during sleep. Low stimulation, dark surfaces, no jarring whites before bed. Night mode is the only mode.

The pause is visible

The waveform display shows data delivery gaps in Spindle Purple — the user can see the interval happening. The pause is not hidden, it is the hero of the UI.

Data is precise

JetBrains Mono for all session data — Hz, duration, pass count, dataset ID. The user should feel they are operating precision equipment, not a wellness app.

Green means something

Recovery Green appears only on positive outcomes. Every other UI element is blue. When green appears, the brain did something measurable. That restraint is the reward system.

Minimal pre-sleep interaction

Select dataset. Select frequency. Put the phone down. NeuroIQ runs the rest. The session setup flow should require no more than three taps.
